

DECLARATION STATEMENT

To Whom It May Concern,

We hereby confirm that our **Fish Collagen Peptide** is manufactured from **100% fish-scale raw material** through a controlled hydrolysis process.

Based on our internal product classification and the characteristic amino-acid profile of the material, including a **Glycine-Proline-Hydroxyproline (GPH) content of more than 40%**, the product is classified by us as a **marine collagen peptide predominantly associated with Type I collagen**.

The product is a **mixed-type marine collagen peptide**. At present, we do not have a validated analytical report specifying or quantifying the percentage of individual collagen types (Type I, Type II, Type III, etc.) in the finished hydrolyzed product.

Accordingly, this statement is provided as our manufacturer's product classification and does not represent a quantitative determination of the individual collagen types.

We confirm that the above information is true and accurate based on our current manufacturing specifications and product knowledge.
